

A high quality panel with outstanding good looks

J-Panel is a general purpose solid wood edge laminated panel manufactured by Juken New Zealand Ltd (JNL) from 100% renewable Radiata Pine plantation forest.

J-Panel is a premium alternative to traditional wood panel products. It's wider and straighter with an aesthetically pleasing wood grain.

J-Panel is typically used to manufacture furniture and kitchen componentry, making it a popular choice with both Builders and Joiners.
